

Operational Blueprint: Recovering Margin and Mitigating Risk Across the Value Chain

Baseline Revenue
\$577,605

Catalog Volume
46,099 Units | 100 SKUs

System Defect Rate
2.28% 

The 5 Strategic Levers

Lever 1: Sourcing Diagnostic

Strategic Action: Re-allocate 18 SKUs from Supplier 4 to Supplier 2 (Lowest cost: \$41.62). Captures \$21.09 per unit in direct savings.

Priority Warning: Haircare drives 38.2-day lead times and a 2.48% defect rate. 15% of portfolio is in high-risk cycle tiers.

Lever 2: Logistics & Movement

Modal Mismatch
Sea freight: \$4.97/unit but 7.12 days.
Road transport triggers 2.62% defect rate (spoilage) vs 1.82% Air.

Strategic Lever
Consolidate volume under Carrier B (5.30 days avg).
Mandate Route A for Kolkata/Chennai.
Yields 18–25% reduction in logistics overhead.

Lever 3: Product Portfolio Rationalization

Strategic Lever: Expand Cosmetics SKU footprint from 26 to 40 (parity with Skincare).
Growth Impact: Balances concentration risk and captures 100–150 bps uptick in gross profit without adding operational drag.

Lever 4: Regional Market Penetration

- **Diagnostic:** High volume but low revenue yield in Delhi indicates deep discounting or skew toward entry-tier SKUs.
- **Strategic Lever:** Implement premium SKU mix in Delhi and align bundle pricing with Mumbai. Unlocks \$25,000–\$35,000 incremental revenue.

Lever 5: Demographics & Attribution

Growth Impact: Driving the Unknown attribution bucket below 10% unlocks precise, personalized cross-selling between skincare and cosmetics, maximizing lifetime value.

Synthesis: The Optimized Future State

Execution phase initiates with Haircare Supplier Audit and Kolkata Route Transition. →
